|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|
| Summary    | Full-stack engineer shipping production React/Next.js/TypeScript apps at two startups, plus four live public projects — including LiveIcon, an open-source animated icon library. Equally at home in the UI layer (Framer Motion, Tailwind, shadcn) and the API + database layer (Node.js, REST, PostgreSQL, Prisma). I like owning features end-to-end.                     |                                                               |                                                      |                                                    |
