|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|----------------------------------|
| Summary    | Full-stack engineer shipping production React/Next.js/TypeScript apps at two startups, plus four live public projects — including LiveIcon, an open-source animated icon library. Equally at home in the UI layer (Framer Motion, Tailwind, shadcn) and the API + database layer (Node.js, REST, PostgreSQL, Prisma). I like owning features end-to-end.                                                                                                                                                                                                                             |                                               |                                  |

|            | Built scalable full-stack applications using React, Next.js, and TypeScript, focusing on responsive dashboards. Developed RESTful APIs with Node.js for authentication and business logic, and designed optimized SQL databases. Integrated frontend and backend systems for efficient data flow and performance, and deployed applications on AWS following security and scalability best practices.                                                                                                                                                                                |                                               |                                  |

|            | As a Backend PHP Developer, I am responsible for designing, developing, and maintaining APIs that power web and mobile applications. My role involves writing clean and efficient PHP code, managing databases, and ensuring smooth integration between frontend and backend systems. I focus on building scalable, secure, and high-performance APIs that enhance user experience and support business requirements. Additionally, I collaborate with cross-functional teams to troubleshoot issues, optimize backend performance, and implement best practices in API development. |                                               |                                  |

|            | Full Stack Developer Intern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                               | August 2024-Jan 2025             |
|            | I contributed to frontend development by building and documenting reusable UI components using Storybook, improving design consistency and development efficiency. I performed thorough testing to ensure a reliable and high-quality user experience. Additionally, I integrated REST APIs to connect frontend interfaces with backend services, enhancing application functionality and ensuring seamless data flow across the system.                                                                                                                                             |                                               |                                  |

|            | Built an open-source animated icon library using <b>Next.js, Framer Motion, and SVGs</b> , featuring reusable and customizable icon components. Implemented smooth motion-based interactions and a copy-to-use workflow to improve developer experience.<br><a href="https://liveicon.vercel.app/">https://liveicon.vercel.app/</a>                                                                                                                                                                                                                                                  |                                               |                                  |

**RedditVerse**

**RedditVerse** is a full-stack web application built using Next.js, React, and TypeScript that enables users to securely share their Reddit profiles with granular privacy controls. A responsive and user-friendly interface was developed using Tailwind CSS, ensuring optimal performance across devices. The project focuses on secure data handling, scalable architecture, and clean UI design while maintaining a seamless user experience.
